

Priyanka — Interview Prep Study Plan (2 Weeks)

Source: Priyanka-Interview-Preparation-Pack.pdf (144 pages, sections 00–14) **Target:** Berribot — Senior Full Stack (Java 17 · Spring Boot · Angular 16 · MongoDB · MySQL · Microservices · AWS S3) **Start:** Wed 1 Jul 2026 → **Interview-ready:** Tue 14 Jul 2026 **Daily budget:** ~2–3 hrs weekdays, ~3–4 hrs weekends. Adjust to your schedule.

Guiding strategy

- **Front-load your gaps** (MongoDB, Java 17) so you have time to revisit them, not cram them last.
- **Lead with strength** (Angular, Spring Boot, Projects) — most interview time lands here.
- **Self-intro + Projects get touched early AND revised throughout** — they're asked in every round.
- **Say answers out loud. Type the code yourself.** Passive reading ≠ prepared.

WEEK 1 — Foundations + close the gaps

Day	Date	Focus (sections)	Pages	Goal for the day
1	Wed 1 Jul	00 Self-Intro + 10 Projects Deep-Dive	5–7, 113–122	Deliver 60s intro from memory; 1 STAR story per project
2	Thu 2 Jul	13 MongoDB (biggest gap)	135–140	Document model, CRUD, aggregation, Spring Data (@Document, MongoRepository)
3	Fri 3 Jul	12 Java 17 + revise 05 Core Java (start)	130–134, 62–76	Records, sealed classes, pattern matching, switch expr, text blocks
4	Sat 4 Jul	05 Core Java (finish) + 01 JavaScript (start)	62–76, 8–21	OOP, collections, HashMap internals, streams, multithreading
5	Sun 5 Jul	01 JavaScript (finish) + 03 TypeScript	8–21, 31–42	Closures, event loop, ES6+; types vs interfaces, generics, utility types
6	Mon 6 Jul	04 Angular (part	43–52	Lifecycle, RxJS

Day	Date	Focus (sections)	Pages	Goal for the day
		1 — your core skill)		(switchMap vs mergeMap, takeUntil), change detection
7	Tue 7 Jul	04 Angular (part 2) + Angular 16 talking points (§14.4)	53–61, 142	NgRx, forms, DI, routing; standalone components, signals, takeUntilDestroyed

End of Week 1 checkpoint:

- ☐ 60-second self-intro smooth without notes
- ☐ Can explain MongoDB vs MySQL and write a basic aggregation + MongoRepository
- ☐ Can name 5 Java 17 features and where you'd use them
- ☐ Can explain RxJS switchMap vs mergeMap and the takeUntil unsubscribe pattern

WEEK 2 — Backend depth, coding, full-stack design, mocks

Day	Date	Focus (sections)	Pages	Goal for the day
8	Wed 8 Jul	06 Spring & Spring Boot + MySQL/JPA	77–90	IoC/DI, REST, JPA, auto-config, exception handling, security basics
9	Thu 9 Jul	09 Coding Problems (part 1) — write on paper	102–107	FizzBuzz, palindrome, two-sum, reverse-string from memory
10	Fri 10 Jul	09 Coding Problems (part 2) + re-solve hard ones	108–112	Type solutions yourself, check complexity, no peeking
11	Sat 11 Jul	08 Microservices + 07 AWS S3 + §14 full-stack scenario	97–101, 91–96, 141–143	Whiteboard upload → S3 + metadata-in-DB with presigned URLs
12	Sun 12 Jul	02 HTML & CSS + 11 HR &	22–30, 123–129	Flexbox/Grid, specificity; Why

Day	Date	Focus (sections)	Pages	Goal for the day
		Behavioral		Wipro, strengths/weaknesses, notice, salary
13	Mon 13 Jul	14 Berriobot Guide full read + revise all weak areas	141–144	Polyglot persistence, senior-level ownership talking points
14	Tue 14 Jul	Mock interview + final revision of flagged gaps	—	Full dry run: intro → coding → backend → frontend → design → HR

Interview-day checklist (from the pack):

- ☐ Can draw RoboGebra & EasyVisa architecture on a whiteboard
- ☐ One strong "challenge I solved" STAR story per project
- ☐ Can explain Spring Boot auto-configuration & @SpringBootApplication
- ☐ Can whiteboard the S3 upload + metadata flow with presigned URLs
- ☐ Can split a feature into microservices and justify the boundaries
- ☐ 2–3 thoughtful questions ready for the interviewer
- ☐ Honest about AWS / Microservices / MongoDB depth — don't oversell

If you only have ONE week (compressed track)

Do these each day, ~4 hrs: **Day1** MongoDB(13) · **Day2** Java17(12)+Core Java(05) · **Day3** Spring Boot+REST+JPA(06)+S3 scenario · **Day4** Angular 16(04+§14.4) · **Day5** Microservices(08)+Coding(09) · **Day6** JS/TS(01,03)+HTML/CSS(02) · **Day7** Self-intro(00)+Projects(10)+HR(11)+mock.

Daily habits (all 14 days, 15–20 min)

- Re-deliver your 60s self-intro out loud.
- Re-solve one coding problem from memory.
- Skim the previous day's section headers (spaced repetition).
