

Interview Questions Compilation

Infosys · Altimetrik · Photon Interactive

Infosys — Technical Round

- 1 How to declare a variable
- 2 Angular life cycle hooks
- 3 How do components communicate
- 4 How to change the text colour on click without using classes
- 5 Box model
- 6 Positioning

Altimetrik — Level 1 Round

- 1 Write a Java program using the Stream API to find the highest salary for employees, department wise
- 2 When was forEach introduced
- 3 Write a program to find the first non-repeating character
- 4 ArrayList vs LinkedList
- 5 For searching purposes, which one would you use and why
- 6 Converting to a text block
- 7 HashMap vs ConcurrentHashMap
- 8 Internal working of HashMap
- 9 Immutable class in Java
- 10 Mutable class
- 11 Criteria for an immutable class
- 12 About Controller and RestController
- 13 PUT vs PATCH

Altimetrik — Angular Round

- 1 Angular component communication
- 2 Angular life cycle hooks
- 3 How to initialize an Observable

- 4 Reactive forms vs template-driven forms
- 5 Formly
- 6 Observable
- 7 Subject vs BehaviorSubject
- 8 In the Angular migration you mentioned, what challenges did you face
- 9 If a button is clicked multiple times triggering multiple API calls, how do you restrict the API calls
- 10 In the frontend, if the request body is missing, how do you handle the error
- 11 Global exception handling

Photon Interactive — First Frontend Round

- 1 Angular 16 features
- 2 Latest changes in Angular
- 3 Zone and zoneless
- 4 What is a component and how do components communicate
- 5 Lifecycle hooks
- 6 ngOnChanges vs ngDoCheck
- 7 Memory leak issue
- 8 What happens if you do not unsubscribe
- 9 How can it behave if you don't unsubscribe
- 10 In the browser, how can it behave if you don't unsubscribe
- 11 Component communication
- 12 If you create a service and provide it in the root module, and also provide the same service privately in a component, will it work or throw an error
- 13 HttpClient — why does Angular use this and what are its advantages
- 14 Given components: home, admin, login, user, product, productList, productDetail — how would you design the routing paths for these
- 15 How would you handle security configuration for these components after login
- 16 Which component would you configure security in
- 17 Route configuration
- 18 How do you protect a URL
- 19 Which component can activate (Route Guards)
- 20 When would you use a Resolver

- 21 Does every component need a Resolver
- 22 Lazy loading
- 23 Disadvantages of lazy loading
- 24 RxJS
- 25 Reactive pattern
- 26 Observable vs Observer
- 27 Hot Observable vs Cold Observable
- 28 If two independent APIs' responses are needed in a single subscription, which operator would you use
- 29 If you use forkJoin, what happens if one API call fails
- 30 State management libraries
- 31 Local storage and session storage — why use a state management library instead
- 32 Side effects
- 33 Angular 17 version features
- 34 Creating a form with username and password where the submit button is disabled until input is typed (standalone component)
- 35 During sign-up, how do you check if the user already exists

Photon Interactive — Second Backend Round

- 1 Is your application built on microservices
- 2 How many services does it have
- 3 Interface and abstract class — real-time examples
- 4 Create a simple Java string array with strings and numbers
- 5 Create an interface
- 6 Create an object of that interface
- 7 Try and catch block
- 8 Finally block
- 9 What happens if you remove the catch block
- 10 If the try block succeeds, what is the purpose of the finally block
- 11 Spring Boot validation
