

PRIYANKA R

priyankaiirt@gmail.com | 8778015851

PROFESSIONAL SUMMARY

Proficient Full Stack Developer familiar with a broad spectrum of programming utilities and languages. Effortlessly handles all aspects of the development process. Collaborative team member with strong technical abilities, providing around 3 years of valuable experience.

EXPERIENCE

PROVILITY SOFTWARE SOLUTIONS - CHENNAI, TAMIL NADU

October 2021 - Present

Software Engineer

- Proficient in developing robust and scalable web applications utilizing a combination of frontend (JavaScript, TypeScript, RxJS, Redux) and backend (Java, Spring Boot, Spring, Groovy, .Net) technologies.
- Familiarity with Angular framework for rapid application development.
- Hands-on experience with project management tools such as Jira, GitHub, and Bitbucket for collaborative development and issue tracking.
- Proficient in using integrated development environments like IntelliJ IDEA and Visual Studio for efficient coding and debugging workflows.

ACADEMICS

Degree/ Certificate	Board/University	School/college	Year of passing	Percentage (%)
B.Tech Information Technology	Anna University	Institute of Road and Transport Technology-Erode	2020	77.1
12	State Board	SRV Girls Higher Secondary School- Namakkal	2016	85.3
10	State Board	SRV Girls Higher Secondary School- Namakkal	2014	94.4

SKILLS

- **Frontend** : JavaScript, Typescript, RxJS, Redux, HTML, CSS, Bootstrap, kendo.
- **Backend** : Java, Spring Boot, Spring, Groovy, ASP .Net Core.
- **Database** : MySQL, Postgres, Neo4J, Azure.
- **Framework** : Angular, Grails.
- **Libraries** : NgRX, Angular-Formly, React, Formik.
- **Project Management Tools** : Jira, Github, Bitbucket.
- **Integrated development Environment** : IntelliJ Idea, Visual Studio.

PROJECTS

1. SUBSEA

APRIL 2024 – PRESENT

Summary:

- The SubSea Project is a specialized software solution designed to manage and optimize subsea operations, including tools, pipeline connections, and equipment related to ships and marine activities. The project focuses on efficiently handling categories, subcategories, and various types of equipment, streamlining processes for improved productivity and operational management.

Contributions:

- Fixed production functionality bugs, ensuring smooth operation and reliability.
- Implemented a new module called Schedule-Manager for managing subsea schedules.
- Developed APIs for the Schedule-Manager module using .NET, enabling seamless backend integration.
- Utilized Kendo UI Grid to implement complex UI functionality, enhancing user experience and data management.
- Designed and developed dynamic category and subcategory management features, allowing for flexible configuration of subsea equipment and tools.
- Collaborated with cross-functional teams to align the project requirements with client needs, contributing to a successful product delivery.
- Wrote unit test cases for all UI components and services to ensure code quality and maintainability.
- Assisted in refining the overall architecture, focusing on modularity and reusability to support future expansions.

Technology:

- Angular, .NET, Docker, Azure Database

2. BACKOFFICE UI ANGULAR VERSION MIGRATION

FEB 2024–MAR 2024

Summary:

- The Backoffice UI underwent a migration to the latest Angular version, aiming to modernize and improve performance. Meticulous testing ensured a seamless transition while minimizing disruptions to existing features. This upgrade not only aligned the UI with current Angular advancements but also set the stage for future enhancements and scalability.

Contributions:

- Migrated four repositories to version 16.
- Migrated the Ticketing web application from version 2 to 16.
- Migrated the ssg web plugin app repository from version 9 to 16.
- Migrated the ssg web plugin app gopass repository from version 4 to 16.
- Migrated the ssg web plugin app version admin repository from version 4 to 16.

3. EASYVISA

MAR 2022 – JAN 2024

Summary:

- The Visa Management System is a comprehensive software application designed specifically for attorneys to efficiently manage their clients, records, forms, and organizational visa processes. This project streamlines the visa application and documentation process, providing attorneys with a centralized platform to effectively handle their caseload and enhance their productivity.

Contributions:

- Implemented the full document portal module, featuring multiple accordion panels for uploading documents.
- Developed custom components using Angular Formly.
- Utilized Angular reactive forms extensively to construct nested forms.
- Customized the image cropper library for profile image usage.
- Migrated to a newer version of Angular, resulting in improved performance and stability.
- Created reusable components employed across multiple modules.
- Wrote unit test cases for all UI components and services.
- Assisted in documenting software specifications and user manuals.

Technology:

- Angular, Grails, Groovy, Postgres, Neo4

4. TRAVEL TOOLS WEB APPLICATION

OCT 2021– MAR 2022

Summary:

- The Travel Tools application provides users with comprehensive features, including real-time vehicle tracking, precise location services, and a convenient timing calendar. Through intuitive tabs for journeys, routes, and stops, users can effortlessly access and monitor live vehicles, offering a seamless experience reminiscent of Google Maps.

Contributions:

- Design and development efforts to introduce the Journey tab feature.
- Designed and deployed the Filter Calendar feature, empowering users to efficiently organize and manage their travel schedules.
- Engineered the incorporation of live vehicle tracking functionality within the Journey tab.
- Proactively identified and resolved a range of CSS issues plaguing the application's visual consistency and responsiveness.
- Wrote unit test cases for all UI components and services

Technology:

- Angular, Spring Boot, postgres.
