

PRIYANKA R

priyankaiirt@gmail.com | 8778015851

PROFESSIONAL SUMMARY

Proficient Frontend Developer familiar with a broad spectrum of programming utilities and languages. Effortlessly handles all aspects of the development process. Collaborative team member with strong technical abilities, providing around 4 + years of valuable experience.

EXPERIENCE

PROVILITY SOFTWARE SOLUTIONS - CHENNAI, TAMIL NADU

October 2021 - Present

Software Engineer

- Proficient in developing robust and scalable web applications utilizing a combination of frontend (JavaScript, TypeScript, RxJS, Redux) and backend (Java, Spring Boot, Spring ,Groovy) technologies.
- Familiarity with Angular and Ionic framework for rapid application development.
- Hands-on experience with project management tools such as Jira, GitHub, and Bitbucket for collaborative development and issue tracking.
- Proficient in using integrated development environments like IntelliJ IDEA and Visual Studio for efficient coding and debugging workflows.

ACADEMICS

Degree/ Certificate	Board/University	School/college	Year of passing	Percentage (%)
B.Tech Information Technology	Anna University	Institute of Road and Transport Technology-Erode	2020	77.1
12	State Board	SRV Girls Higher Secondary School- Namakkal	2016	85.3
10	State Board	SRV Girls Higher Secondary School- Namakkal	2014	94.4

SKILLS

- **Frontend** : JavaScript, Typescript, RxJS , Redux, HTML, CSS, Bootstrap,kendo.
- **Backend** : Java, Spring Boot, Spring, Groovy,ASP .Net Core, Spring reactive.
- **Database** : MySQL, Postgres, Neo4J,Azure.
- **Framework** : Angular, Ionic
- **Libraries** : NgRX, Angular-Formly, React, Formik.
- **Project Management Tools** : Jira, Github, Bitbucket.
- **Integrated development Environment** : IntelliJ Idea, Visual Studio.

PROJECTS

1.ROBOGEBRA

OCT 2024 – PRESENT

Summary:

- RoboGebra is an AI-driven digital learning ecosystem designed to deliver highly interactive mathematics education for school students. The platform combines a scalable Backoffice system for content and operations management with a mobile-first User App that provides real-time AI explanations, personalized study timelines, quiz workflows, and progress intelligence. My role involves end-to-end feature development and testing.

Contributions:

- **Architected and delivered a personalized learning dashboard**, integrating progress analytics, learning timelines, and solution with both detailed and short Answers
- **Built a scalable Study Reminder system** with flexible scheduling, notification delivery, and robust REST APIs (GET, POST, PUT, DELETE), improving user consistency and retention.
- **Designed and implemented the Study List module**, enabling students to create, organize, and track academic goals with real-time data sync across the app
- **Developed an advanced AI-powered math explanation engine**, generating step-by-step reasoning, formula breakdowns, and bilingual (Tamil/English) explanations.
- **Engineered the interactive Quiz Module**, supporting dynamic questions, instant evaluation, solution walkthroughs, and seamless integration with AI explanation services.
- **Implemented real-time mathematical computation and visualization**, allowing users to modify values and instantly view updated results, graphs, and AI-driven insights.
- **Integrated rich multimedia learning assets**, including bilingual video explainers, animated visuals, and interactive 3D graphs, significantly enhancing conceptual clarity.

Technology:

- Angular,Ionic,Java,Mysql

2.SUBSEA

APRIL 2024 – SEP 2024

Summary:

- The Subsea Project is a specialized software solution designed to manage and optimize subsea operations, including tools, **pipeline connections**, and equipments related to ships and marine activities. The project focuses on efficiently handling categories, subcategories, and various types of **equipment**, **streamlines** processes for improved productivity and operational management.

Contributions:

- Fixed **production functionality** bugs, ensuring smooth operation and reliability.
- Implemented a new module called **Schedule-Manager** for managing subsea schedules.
- Developed **APIs** for the Schedule-Manager module using .NET, enabling seamless backend integration.
- Utilized Kendo UI Grid to implement **complex UI functionality**, enhancing user experience and data management.
- Designed and developed **dynamic category and subcategory** management features, allowing for flexible configuration of subsea equipment and tools.
- Assisted in refining the overall architecture, focusing on **modularity and reusability** to support future expansions.

Technology:

- Angular, .NET, Docker, Azure Database

3.BACKOFFICE UI ANGULAR VERSION MIGRATION

FEB 2024–MAR 2024

Summary:

- The Backoffice UI underwent a migration to the **latest Angular version**, aiming to modernize and improve performance. Meticulous testing ensured a seamless transition while minimizing disruptions to existing features. This upgrade not only aligned the UI with current Angular advancements but also set the stage for future enhancements and scalability.

Contributions:

- Migrated four repositories to version 16.
- Migrated the Ticketing web application from version 2 to 16.
- Migrated the ssg web plugin app repository from version 9 to 16.
- Migrated the ssg web plugin app gopass repository from version 4 to 16.
- Migrated the ssg web plugin app version admin repository from version 4 to 16.

4.EASYVISA

Nov 2021 – JAN 2024

Summary:

- The Visa Management System is a comprehensive software application designed specifically for attorneys to efficiently manage their clients, records, forms, and organizational **visa processes**. This project streamlines the visa application and documentation process, providing attorneys with a centralized platform to effectively handle their caseload and enhance their productivity.

Contributions:

- Implemented the full **document portal module**, featuring multiple accordion panels for uploading documents.
- Developed custom components using **Angular Formly**.
- Utilized Angular reactive forms extensively to construct nested forms.
- Customized the **image cropper** library for profile image usage.
- Migrated to a **newer version of Angular**, resulting in improved performance and stability.
- Created **reusable components** employed across multiple modules.
- Wrote **unit test cases** for all UI components and services.
- Assisted in documenting software specifications and user manuals.

Technology:

- Angular, Grails, Groovy, Postgres, Neo4
